PROFILE

I spent four years at Oracle owning product roadmap and shipping a recruiting product used by enterprise HR teams globally, starting as an engineer and growing into someone who drove cross-functional alignment, defined requirements, and measured outcomes. I am now completing an MBA at Imperial, consulting on a live GTM strategy for a green-tech scale-up, volunteering as a Product Manager and Full-Stack Engineer at Ditch the Label where I am building digital safety education tools for young people, and developing an end-to-end booking and practice management platform for a therapy practice using Claude Code and Cursor. I am looking for a role where I can drive innovation and keep building things that matter.

PROFESSIONAL EXPERIENCE

Oracle April 2024 – August 2025

Senior Application Engineer · Oracle Global Human Resources (GHR)

- Reduced recruiter friction in the offer-to-acceptance flow across hundreds of enterprise clients by delivering the Job Offers module end-to-end, managing the backlog through to launch, writing user stories and acceptance criteria, running sprint planning with a team of four engineers, and coordinating QA.
- Shipped features on time across competing priorities by leading cross-functional alignment across engineering, QA, design, and dependent product teams, managing dependencies, and presenting trade-off decisions to senior stakeholders.
- Reduced server load and latency by 17% for recruiting professionals across hundreds of enterprise clients by defining requirements, migrating the Job Offers UI from Oracle ADF to VBCS, and delivering a client-side architecture that enabled a significantly faster experience.
- Scaled AI adoption across 10 HR workflows and drove measurable efficiency gains by identifying high-value use cases, designing prompt structures, building a post-launch measurement framework, and iterating based on data in partnership with Product Managers.
- Delivered customised data-driven notification reports across all GHR flows for HR events and compliance tracking by defining requirements and building alerts using Oracle BI Publisher.
- Reduced data entry errors and improved transaction speed for HR users by identifying manual entry patterns through user feedback and shipping an Autocomplete feature enabling dynamic field validation and automatic data population.

Oracle July 2021 – March 2024

Application Engineer · HCM Cloud Journeys

- Acted as primary product and technical contact for 50+ international enterprise clients on HCM Cloud Journeys, translating client pain points into clearly defined product improvements and coordinating engineering fixes end-to-end.
- Documented, tracked, and resolved over 200 bugs across the full stack, identifying recurring patterns across clients and implementing systemic fixes that improved platform stability and reduced repeat issues.
- Defined requirements, designed and developed REST APIs for Oracle Journeys to automate task assignment and scheduling across employee lifecycle events, reducing manual HR workload and improving system reliability.
- Reduced error rates and accelerated go-live timelines by identifying recurring failures in HR data uploads via Oracle Fusion Spreadsheet Data Loader, diagnosing root causes across staging and application tables, and resolving upload errors for HR and finance systems.

PROJECTS

Ditch the Label: Digital Safety and Education Platform April 2026 – Present

London, UK · Volunteer Product Manager & Full-Stack Engineer · UK Digital Youth Charity

- Defined accurate, age-appropriate learning outcomes and content structure across multiple safeguarding topics by conducting research with educators, child safety organisations, and subject matter experts before any building began.
- Improved engagement and module completion among young users by identifying poor completion rates in traditional course formats and designing a gamified badge and Champion progression model that makes safeguarding education feel rewarding rather than instructional.
- Facilitated future school-wide deployment with minimal friction by building a safeguarding-compliant platform on React, Node.js, and PostgreSQL with an anonymised-by-design data model ensuring no student PII is stored.

Therapy Practice Platform *May 2026 – Present*

London, UK · Personal Project · Product Manager & Full-Stack Developer

- Ran end-to-end product discovery for a therapy practice looking to expand, conducting user interviews with the practitioner, researching the market, and defining requirements and success metrics before development began.
- Delivered a patient-facing booking platform and companion therapist mobile app from discovery through to deployment by designing the booking flow and UX from scratch using Claude Code and Cursor.

ACHIEVEMENTS

President, IB LGBTQ+ & Allies Careers Club *September 2025 – Present*

- Lead all diversity-focused career programming and corporate partnerships for the club, including speaker panels, networking events, and mentoring schemes.
- Represented Imperial's LGBTQ+ community as a panelist at Capco's Trans Visibility event, speaking on lived experiences, allyship, and building workplaces where people feel seen, heard, and supported alongside colleagues from across the world.

Secured top national ranks in IIT entrance exams

- Ranked in the top 0.1% nationally in JEE Main and top 1.1% in JEE Advanced, India's premier engineering entrance exams taken by over a million candidates annually.

ADDITIONAL SKILLS

- **Product & strategy:** Product roadmapping, user story writing, acceptance criteria, backlog management, stakeholder management, requirements gathering, GTM strategy, competitive analysis, user research and discovery
- **Analytics & data:** SQL, Google Analytics, Excel/Google Sheets, product metrics, KPI tracking, A/B testing
- **Delivery:** Agile/Scrum, Jira, Confluence, sprint planning, end-to-end product ownership
- **Technical:** Python, Java, REST APIs, Node.js, HTML/CSS/JavaScript, React, Postman
- **AI & prototyping:** Claude Code, Cursor, AI prompt engineering, LLM-assisted prototyping

EDUCATION

Imperial Business School *September 2025 – September 2026*

London, UK · Full-time MBA

Live Consulting Project: Puraffinity

- Shaped market entry strategy for a green-tech scale-up by developing a country prioritisation framework with scoring variables across market size, regulatory environment, competitive landscape, and infrastructure readiness.
- Validated market assumptions and identified the optimal GTM entry model for three shortlisted countries by querying the EEA WISE and national databases with primary data and conducting targeted desk research.

International Institute of Information Technology *August 2017 – June 2021*

Hyderabad, India · Bachelor of Technology, Major in Computer Science
